Within the field of Social Psychology, there is decades of research documenting basic principles of bystander behavior that have a broad impact on individual and group choices. This body of research seeks to understand why individuals choose to intervene or remain passive when they are in the role of a bystander in a potentially risky, dangerous or emergency situation. The current body of knowledge demonstrates bystander influences such as: (1) diffusion of responsibility – when faced with a crisis situation, individuals are less likely to respond when more people are present because each assumes that someone else will handle it (Darley & Latane, 1968; Chekroun & Brauer, 2002); (2) evaluation apprehension - when faced with a high risk situation, individuals are reluctant to respond because they are afraid they will look foolish (Latane & Darley, 1970); (3) pluralistic ignorance – when faced with an ambiguous, but potentially high-risk situation, individuals will defer to the cues of those around them when deciding whether to respond (Clark & Word, 1974; Latane & Darely, 1970); (4) confidence in skills – individuals are more likely to intervene in a high-risk situations when they feel confident in their ability to do so effectively; (5) modeling – individuals are more likely to intervene in a high risk situation when they have seen someone else model it first (Bryan & Test, 1967; Rushton & Campbell, 1977). These well documented principles not only suggest what inhibits bystanders from intervening, but also, strategies for effectively overcoming these inhibitions and increasing the pro-active response of bystanders.

**Application to Violence Prevention:**

As the Social Diffusion Theory demonstrates the power of identifying socially influential individuals to endorse and exhibit targeted behaviors, the Bystander research provides the targeted behavior we want endorsed. The behaviors include actively intervening in situations that are imminently or potentially high-risk for violence, as well as effective means to elicit that targeted behavior. Further, this body of research provides specific strategies to increase the likelihood that the trained participants will actually intervene when they are in the role of a bystander.

A green dot is any behavior, choice, word, or attitude that promotes safety for everyone and communicates utter intolerance for rape, partner violence and stalking. A green dot is intervening in a high risk situation – a green dot is talking to your friends about how you feel about violence – a green dot is hanging up a prevention poster – a green dot is putting a green dot statement on your social networking page - a green dot is wearing your green dot gear– a green dot is putting a link on your website to your local prevention program - a green dot is organizing a training for your organization. A green dot is simply your individual choice at any given moment to make our community safer.
