

Example Contouring Exercise

What is the maximum point elevation value you observe in the data?

What is the minimum point elevation value you observe in the data?

If you use a 10 ft contour interval, how many lines will you have to draw?

If the contour interval is 10 ft, what will be the even-multiple of 10 values of the contour lines you will have to draw?

Start with the 70 ft contour line, draw and label contours with an interval of 10 feet.
