## §6.1 KEY IDEAS, page 1 of 2

| Decimals   |                     |                      |
|--|---------------------|----------------------|
| Term: Decimal Points   | Term: Mixed Decimal | Term: Decimal Places |
|  |                     |                      |
| Reading and Writing Decimals   |                     |                      |
|  |                     |                      |
|  |                     |                      |
| Models for Decimals: Decimal Squares   |                     |                      |
|  |                     |                      |
| Models for Decimals: Place Value Table   |                     |                      |
|  |                     |                      |
|  |                     |                      |
| Models for Decimals: Number Lines  |                     |                      |
|  |                     |                      |
|  |                     |                      |
| Equality of Decimals   |                     |                      |
|  |                     |                      |
|  |                     |                      |
| Inequality of Decimals   |                     |                      |
|  |                     |                      |
| Place Value Test for Inequality of Decimals  |                     |                      |
| , and a second of the second o |                     |                      |
|  |                     |                      |
| Rational Numbers   |                     |                      |
| Term: Rational Numbers   |                     |                      |
|  |                     |                      |
| Rational Numbers as Decimals   |                     |                      |
|  |                     |                      |
| Power of ten denominators  |                     |                      |
|  |                     |                      |
|  |                     |                      |
|  |                     |                      |
|  |                     |                      |
|  |                     |                      |
|  |                     |                      |

## §6.1 KEY IDEAS, page 2 of 2

| Denominator can be converted to a power of ten   |
|--|
|  |
|  |
|  |
|  |
| When is a rational number a terminating decimal? |
|  |
|  |
| Rounding Decimals                                |
|  |
|  |
