

Guidelines for Using GarageBand 10.0.3 in ITC001

Finder -> applications -> GarageBand
Empty project (choose)
Audio [image of microphone] (create)
Deselect [1234] and [metronome]

*Apple in upper left corner ->
System Preferences -> Sound
Output: USB; Input: USB; (test if it
works)

++

(on left side)Voice -> Compressed Voice (or other option)

double click on title in track (eg Compressed Voice) – type [a title]

with Playhead on the left (at the beginning) – using the headset*

click Red record icon to record – speak

click Red record icon to stop – press spacebar to stop playhead

move playhead to beginning – use spacebar to start and stop

change scale with sidebar in upper right

to split – place playhead at split point

be certain track is selected

Edit -> Split Regions at Playhead (command T)

click on region “to be deleted” -> delete key

to drag region – click and drag on top white bar

to add another track – Track -> New Track -> Audio [mike] (create)

continue as described above at ++

to add music – Loops (patiently wait)

browse options – drag choice into new track

adjust volume with slider on left

adjust volume of sections – click on adjustment point – drag volume up or down

to save – Share -> Export Song to Disk

type title – where: Desktop – MP3 (export)

to finish – drag icon from Desktop to your public_html
